Final Project Proposal

Assignment Specifications:

- All team member names must be listed on the proposal.
- Your proposal must be submitted as a .pdf file.
- Upload the pdf to the D2L Final Project Proposal dropbox.

An application proposal outlines the goals and hopes of your application.

What does the proposal need to contain?

When you are writing your proposal think of what do you expect your application to accomplish.

1. **Title Page:** The title of your application and along with all group member names needs to be clearly indicated on the title page.
2. **The Rationale / Focus of the Application:** This should be a paragraph that describes the type of application that you are going to build and the reason why this application is useful / needed / important. Describe what will make your application unique.
3. **Design goals:** Describe what the application is going to look like. Provide a mock-up and flow of your application. Describe your initial thoughts about window layouts.
4. **Target Audience:** Describe the audience that your application is intended to reach.
5. **Main Elements:** List and provide a brief description of at least 4 main elements (windows / modules) of the application. These main elements will become key parts within the application.
6. **Limiting factors:** Identify any technical concerns that could limit the design goals of the application.
